Drones for Industrial
Inspections at Height

Metal structures need to be regularly inspected for corrosion. Inspections are done to prevent unexpected downtime, maintain compliance with regulation, and to ensure a safe work environment.

The Skygauge
will do for you
Your Tool to Access
any Tall Structure
Metal structures need to be regularly inspected for corro-
sion. Inspections are done to prevent unexpected down-
time, maintain compliance with regulation, and to ensure
a safe work environment.
Perform Safer Inspections
Using drones for inspections eliminates risk
associated to work at height. The worker
stays safely on the ground while the drone
reaches remote and hazardous inspection
points.
Minimize Downtime
Refineries
